

DIVYANSH GUPTA

Delhi, India | inbox.DivyanshGupta1@protonmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#) | [Codeforces](#)

PROFESSIONAL SUMMARY

Second-year Computer Science Engineering student (AI/ML) with hands-on experience building full-stack web applications, backend APIs, and autonomous AI agents. Solid foundation in Data Structures & Algorithms using C++, graph databases, and RAG pipelines. Focused on practical software engineering and open-source project development.

EDUCATION

Mirai School of Technology, Ghaziabad, India — *Bachelor of Technology in Computer Science Engineering (AI/ML)* | Expected Graduation: 2029

TECHNICAL SKILLS

- **Languages:** C++, Python, JavaScript, TypeScript
- **Frontend:** HTML, CSS, React
- **Backend:** Node.js, Express.js
- **Databases:** MongoDB, Neo4j
- **AI & Machine Learning:** AI Agents, Retrieval-Augmented Generation (RAG)
- **Tools & Platforms:** Git, GitHub, Vercel

PROJECTS

BenefitOS — Citizen Welfare Discovery Platform | [GitHub](#)

TypeScript, Node.js, Express.js, React, Neo4j, AI / RAG

- Engineered a citizen-facing welfare discovery platform that maps applicant eligibility criteria against public government schemes.
- Designed graph data models using Neo4j to manage and query relational dependencies between eligibility rules, citizen profiles, and scheme criteria.
- Implemented decoupled client-server architecture with Express.js API gateway to handle application workflows and scheme recommendations.
- Integrated AI-driven RAG workflows to parse requirements and provide conversational guidance for scheme onboarding and document readiness.

TRON — Autonomous News Intelligence Agent | [GitHub](#)

Python, Autonomous AI Agents, LLM APIs, Automation, Web Search

- Built an autonomous AI agent to perform continuous topic discovery, web research, and candidate news evaluation against defined scoring criteria.
- Developed an automated decision pipeline with rejection logic and multi-model LLM generation to synthesize structured updates.
- Implemented persistent deduplication checking and scheduled autonomous publishing workflows without requiring manual intervention.

Incident DNA AI — Autonomous Code Failure Analysis | [GitHub](#)

Python, AI Agents, Code Analysis, Pattern Detection, Automation

- Developed an autonomous engineering system that analyzes software runtime failures, identifies error patterns, and assists in incident debugging.
- Built automated log parsing and pattern-matching pipelines to detect recurring software defects and recommend remediation steps.
- Structured modular agent workflows to accelerate root-cause diagnosis and improve software reliability across codebases.

Student Management System — Full-Stack Academic Platform | [GitHub](#)

JavaScript, Node.js, Express.js, HTML, CSS, REST APIs

- Developed a complete student management web application for administrative record keeping, enrollment tracking, and profile management.
- Built modular RESTful API endpoints using Node.js and Express.js to handle data validation, query filtering, and record updates.
- Designed clean, responsive user interfaces using HTML and CSS for seamless student record visualization and administrative workflows.

COMPETITIVE PROGRAMMING & OPEN SOURCE

- **Problem Solving & DSA:** Actively practicing Data Structures & Algorithms in C++ on [LeetCode](#) and [Codeforces](#).
- **Open Source Development:** Building and maintaining open-source AI agent architectures, web tools, and full-stack systems on [GitHub](#).
